#### **HUMANA SVERIGE**

# Collection and distribution of textiles in 2021

**Textile Transparency Report 2021** 

#### 1 Methodology

#### 1.1 Data collection

This report is based on data collected from European Humana organisations and from sorting centres receiving textiles from these collection organisations. Data from the collection organisations were collected through a survey in the form of a spreadsheet to be filled in.

#### **Collection organisations**

The collection organisations were asked to provide quantitative information on the amounts of textiles they collected and sold in 2021, as well as qualitative data on how they register data on the textiles they handle.

#### Sorting centres

The list of sorting centres to be contacted was established based on the reports from the collection organisations. Sorting centres were contacted if it had received more than 100 tonnes from at least one of the collection organisations in 2021. The sorting centres are asked to provide data on all textiles that are received from and sorted at their location, as required of them according to the Humana People to People Code of Conduct.

#### **Comparison with previous results**

The collected data is registered in the database which Mepex has compiled as part of the work with previous years' reports. In the registration process, the data were checked for consistency and quality, and where necessary, the sorting centres were asked to clarify. All communication with the sorting centres has been done in writing.

### 1.2 Assumptions and calculations

#### Assumption on quality and averages

The sorting centres do not have specific information on the fate of textiles collected by any single supplier (e.g., Humana Sweden) as the textiles are mixed with textiles from other collection organisations in the sorting process. We assume that for each sorting centre, the

quality of the textiles from the selected collection organisation is at least equal to the average quality of the total amount of textiles received at the sorting centre.

Consequently, the distribution of possibilities for utilization (e.g., reuse, material recycling, disposal as waste) for the textiles sent to a given sorting centre equals the average results for all the textiles received at that sorting centre.

The overall distribution of possibilities for utilization of the textiles and where the textiles from Humana Sweden end up is then calculated as a weighted average based on the amounts of textiles sold to each sorting centre.

#### **Calculations**

The calculations are made based on the reports from the sorting centres. Percentages are calculated in relation to the amount of textiles arriving at the sorting centres. This means that waste removed by the collector prior to export is not included in the calculation.

Textiles accounted for is calculated as the share of textiles sold from the collection organisation to sorting centres which have reported, in relation to the total amount of textiles sold by that collection organisation.

#### 1.3 Sources of uncertainty

#### Shipments in transit

There are some examples of minor differences between the amounts of textiles reported as received by the sorting centres and the amounts sent by the collection organisation. This difference is attributed to the transit of shipments, i.e., shipments sent late in the year and received at the sorting centres early in the next year. We have no reason to think that these differences influence the overall results.

Interpretation of the survey form In the reporting for 2020, the survey form was updated with the aim of improving the understanding of the composition of the received textiles. To this end, the sorting centres are asked to report on "reuse" in four categories: clothes, shoes, accessories (e.g.,

Client: Humana Sweden

belts and hats) and other textiles (e.g., bed linen, towels and similar).

In addition, they are asked to provide information on the type of material recycling. We are aware that the definitions given in the form are interpreted in slightly different ways, which might affect the balance between reuse and material recycling.

Furthermore, the sorting centres use different labelling systems for their qualities, which means there is an interpretation done to match the survey form.

#### 2 Textile collection 2021

The reported amounts of textiles collected by Humana Sweden and sold to sorting centres in 2021 is shown in Table 1. The difference between collected and sold is explained by the stock balance.

Before export, contaminated textile waste and non-textile waste were removed by the collector. The waste is handled by waste management companies in Sweden and not included in the results in this report.

Table 1 - Reported amounts of used textiles collected and sold from Humana Sweden 2021

	Amount (tonnes)	Comment
Collected textiles in 2021	2 781	Textiles excluding waste
Sold from warehouse storage	163	
Total sales 2021	2 468	
Waste removed by Humana Sweden	150	Waste removed at the warehouse of Humana Sweden. Not included in further calculations.

# 3 Sorting centres receiving textiles from Humana Sweden

In 2021, Humana Sweden sold used textiles to 14 different sorting centres as shown in Table 2. Seven of these were not asked to report as they received less than 100 tonnes of textiles from Humana Sweden in 2021.

All the sorting centres that was asked to report have replied but three of them are omitted from the calculation due to insufficient data quality. The reports are shown in Table 2.

The four reports used for the calculations are mostly satisfactory. In some cases, it is not clear if the waste reported from the sorting centres arises from the sorted textiles alone or if it includes waste from other parts of the business. The textile content in the waste is also often hard to determine.

Overall, this is not expected to affect the results as the reported amounts of waste are small compared to the amount of textiles.

Client: Humana Sweden

Table 2 – Overview of reported amounts of textiles sent and received in 2021 per sorting centre

Sorting centre	Short name	Textiles sent from Humana Sweden (tonnes)	Received at sorting centres (tonnes)
One World Clothes Trade Bulgaria Ltd.	OWCT Bulgaria	696	774
Textile House for EURO TRADE s.r.o.	TH Slovakia	295	295
Humana People to People Slovakia s.r.o.	HPP Slovakia	192	212
UAB HUMANA LT	HPP Lithuania	679	429
AMOR		160	Insufficient data quality. Handled as not reported.
Tiburon		107	Insufficient data quality. Handled as not reported.
MB Fashion Lab		198	Insufficient data quality. Handled as not reported.
Scandinavian Secondhand		43	Not required to report
Rojan Dis		10	Not required to report
NPSW Bygg		30	Not required to report
Byggimperium		20	Not required to report
Bin Ismail Trading		18	Not required to report
Dariusz Mańkowski		18	Not required to report
Nordstyle OY		2	Not required to report
Total		2 327	1 711
Total amounts reported <sup>1</sup>		1 862	
Total amounts unreported <sup>2</sup>		606	

 $<sup>^{1}</sup>$  Sum of the amounts Humana Sweden reports having sold to the sorting centres that have reported.

<sup>&</sup>lt;sup>2</sup> Calculated as the sum of the amounts Humana Sweden reports having sold to sorting centres that have not reported, including small sorting centres (<100 tonnes).

Figure 1 shows that the textiles from Sweden are primarily sent to sorting centres in Bulgaria and Slovakia. OWCT Bulgaria received 45 % of the textiles reported by the sorting centres, which means that the overall results are significantly influenced by the report from this sorting centre.

Figure 2 illustrates the share of textiles from Humana Sweden compared to the overall

amounts of textiles received at the sorting centres.

The textiles collected by Humana Sweden only represent a small fraction of the total amount of incoming textiles. The results from the sorting centres may therefore be less representative of the quality of the textiles collected in Sweden.

## 4 Utilization of the collected textiles

The distribution of possibilities for utilization of the textiles collected by Humana Sweden from 2021 is shown in Figure 3. A comparison to the previous three years is shown in Figure 4.

While there was a decline in the share of textiles categorized as going to reuse in 2020 compared to 2019, this year's reports indicate an increase compared to 2020.

Looking at the period 2020-2021, the share of textiles going to reuse is overall slightly lower than in the years before. Based on previous revisions of several of the sorting centres, we know that the sorting centres will always produce as much of the reusable categories as

possible as this is where the economic potential is. Therefore, the sorting itself is not expected to be a reason for the decline in textiles for reuse.

We find it more likely that the decline is linked to the quality of the incoming textiles. A possible explanation is UFF-Humana states that they consider it likely that as a bigger share of the used textiles available on the market is being collected, the amount of textiles of poorer quality increases, which consequently decreases the average quality.

We also expect that the more detailed reporting and stricter definitions applied in the reporting since 2020 might also have clarified the distinction between reuse and material recycling.

#### 5 Geographical distribution

The geographical distribution of sorted textiles and waste originally collected by Humana Sweden is displayed in Figure 5.

The distribution between the different regions is qualitatively similar to the previous year, with Europe being the region that receives the largest amount of the textiles, followed by similar amounts being sold to Africa and Asia.

In this analysis, note that Asia covers a very large area and many industries, including India, Pakistan, and Turkey.

All sorting centres report that waste handling is handled by local actors.

Humana Sweden reports that they have bought in total 118 tonnes of textiles back from OWCT Bulgaria, HPP Lithuania and HPP Slovakia. This is confirmed by the reports from the sorting centres.

Note that this number is different from the amount shown in Figure 5. The textiles bought back by Humana Sweden is a mix of textiles from Humana Sweden and other sources, as the textiles are commingled at the sorting centre.

On the other hand, Figure 5 displays the average destination and purpose of the textiles originally collected by Humana Sweden.
